On file in CIA Industrial Register is a report of the study results for a proposed Portland Cement Plant to be constructed in the Sogamoso area of the Province of Boyaca. [REDACTED]

The proposal has been accepted and construction should begin in the Summer of 1955 on a 250 Ton Portland Cement Plant. To this capacity will be added 250 tons of slag so that the total output will be 500 tons of Portland Blast Furnace Slag Cement per day. A 450 to 500 ton capacity rotary kiln will be installed so that when it is desired to double the capacity of the plant, it will be necessary to install one grinding unit on the raw side and two grinding units on the clinker side.
